KEY=MANUAL - BRODERICK PHOENIX

Pricing and Revenue Optimization

Stanford University Press This is the first comprehensive introduction to the concepts, theories, and applications of pricing and revenue optimization. From the initial success of "yield management" in the commercial airline industry down to more recent successes of markdown management and dynamic pricing, the application of mathematical analysis to optimize pricing has become increasingly important across many different industries. But, since pricing and revenue optimization has involved the use of sophisticated mathematical techniques, the topic has remained largely inaccessible to students and the typical manager. With methods proven in the MBA courses taught by the author at Columbia and Stanford Business Schools, this book presents the basic concepts of pricing and revenue optimization in a form accessible to MBA students, MS students, and advanced undergraduates. In addition, managers will find the practical approach to the issue of pricing and revenue optimization invaluable. Solutions to the end-of-chapter exercises are available to instructors who are using this book in their courses. For access to the solutions manual, please contact marketing@www.sup.org.

Brokers of Faith, Brokers of Empire

Armenians and the Politics of Reform in the Ottoman Empire

"This book argues against the dominant historical view that Ottoman Armenians were united in resisting empire. Drawing on underused Armenian sources and archives, Richard Antaramian reveals the critical role the Armenian Church and clergy played in the implementation of the Ottoman state's reform efforts during the mid-nineteenth century Tanzimat era. Antaramian rethinks conceptions of the Ottoman state in terms of center and periphery, offering a networked model of empire in its place. This orients us to a view of a more dynamic political space, which has implications for understanding the Ottoman Empire, nationalism in the Middle East, and empires in general"--
