Zoology for Kids

Understanding and Working with Animals, with 21 Activities

Chicago Review Press An interactive introduction to working with animals Zoology for Kids invites the next generation of zoologists to discover the animal kingdom through clear, entertaining information and anecdotes, lush color photos, hands-on activities, and peer-reviewed research. Young minds are introduced to zoology as a science by discussing animals' forms, functions, and behaviors as well as the history behind zoos and aquariums. Related activities include baking edible animal cells, playing a dolphin-echolocation game, and practicing designing an exhibit. Young readers can peek into the world of zookeepers and aquarists, veterinarians, wildlife researchers, and conservationists as they "train" their friends, mold a tiger's jawbone, and perform field research in their own backyard. This engaging resource provides readers with new knowledge, a healthy respect for the animal kingdom, and the idea that they can pursue animal-related careers and make a difference to preserve and protect the natural world.

Opening Science

The Evolving Guide on How the Internet is Changing Research, Collaboration and Scholarly Publishing

Springer Modern information and communication technologies, together with a cultural upheaval within the research community, have profoundly changed research in nearly every aspect. Ranging from sharing and discussing ideas in social networks for scientists to new collaborative environments and novel publication formats, knowledge creation and dissemination as we know it is experiencing a vigorous shift towards increased transparency, collaboration and accessibility. Many assume that research workflows will change more in the next 20 years than they have in the last 200. This book provides researchers, decision makers, and other scientific stakeholders with a snapshot of the basics, the tools, and the underlying visions that drive the current scientific (r)evolution, often called 'Open Science.'

Conservation Biology for All

Oxford University Press Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conversion and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

The Routledge Handbook of Research Methods for Social-Ecological Systems

Routledge The Routledge Handbook of Research Methods for Social-Ecological Systems provides a synthetic guide to the range of methods that can be employed in social-ecological systems (SES) research. The book is primarily targeted at graduate students, lecturers and researchers working on SES, and has been written in a style that is accessible to readers entering the field from a variety of different disciplinary backgrounds. Each chapter discusses the types of SES questions to which the particular methods are suited and the potential resources and skills required for their implementation, and provides practical examples of the application of the methods. In addition, the book contains a conceptual and practical introduction to SES research, a discussion of key gaps and frontiers in SES research methods, and a glossary of key terms in SES research. Contributions from 97 different authors, situated at SES research hubs in 16 countries around the world, including South Africa, Sweden, Germany and Australia, bring a wealth of expertise and experience to this book. The first book to provide a guide and introduction specifically focused on methods for studying SES, this book will be of great interest to students and scholars of sustainability science, environmental management, global environmental change studies and environmental governance. The book will also be of interest to upper-level undergraduates and professionals working at the science-policy interface in the environmental arena.

Marginalisation and Aggression from Bullying to

Genocide

Critical Educational and Psychological Perspectives

Springer In this book, the author proposes the existence of a continuum of aggressive marginalisation phenomena, ranging from the unfortunately commonplace experiences of prejudice, discrimination and bullying behaviour, through to genocide. Attempts made by researchers and practitioners to understand, counter and prevent bullying behaviour are reviewed. A key finding has been that the success that has been accrued has been limited, especially when the case of those who belong to so-called 'minority' groups (who are often the target of prejudice outside of the school gates) is considered; it is suggested that future anti-bullying actions should meaningfully engage with prejudice as an underlying factor. After a critical consideration of the various psychological understandings of aggression, aggressive behaviour and marginalisation has been made, the author goes on to introduce and assess an eight-stage model of physical genocide, based primarily on insights from social cognitive psychology, and exemplified in the history of the Lakota-Cheyenne Campaign (1864-1890). This is followed by a consideration of the cultural genocide levelled against indigenous peoples (exemplified in the Sami people in Norway, and indigenous peoples of North America), as implemented through the actions of educational systems and educators. The book ends with some suggestions being made regarding our potential to address the 'One' and 'Other' mindset that is proposed as underlying the continuum of aggressive marginalisation phenomena - through the psychological understandings that we can offer, the educational practice that we can provide, and in the conscious acts of the affirmation of humanity we can make in our individual and collective choices. Stephen James Minton is a lecturer in the psychology of education at the School of Education, Trinity College Dublin, Ireland. He has extensive experience in the fields of anti-bullying research and practice, and is interested in the histories and psychosocial situations, and especially the educational experiences, of marginalised people and groups.

Zoology

WCB/McGraw-Hill The new 7th edition of "Zoology" continues to offer students an introductory general zoology text that is manageable in size and adaptable to a variety of course formats. It is a principles-oriented text written for the non-majors or the combined course, presented at the freshman and sophomore level. "Zoology" is organized into three parts. Part One covers the common life processes, including cell and tissue structure and function, the genetic basis of evolution, and the evolutionary and ecological principles that unify all life. Part Two is the survey of protists and animals, emphasizing evolutionary and ecological relationships, aspects of animal organization that unite major animal phyla, and animal adaptations. Part Three covers animal form and function using a comparative approach. This approach includes descriptions and full-color artwork that depict evolutionary changes in the structure and function of selected organ systems.
