### CLIMATE WARS

---

---

#### WHAT PEOPLE WILL BE KILLED FOR IN THE 21ST CENTURY

---

John Wiley & Sons Struggles over drinking water, new outbreaks of mass violence, ethnic cleansing, civil wars in the earth's poorest countries, endless flows of refugees: these are the new conflicts and forces shaping the world of the 21st century. They no longer hinge on ideological rivalries between great powers but rather on issues of class, religion and resources. The genocides of the last century have taught us how quickly social problems can spill over into radical and deadly solutions. Rich countries are already developing strategies to garner resources and keep 'climate refugees' at bay. In this major book Harald Welzer shows how climate change and violence go hand in hand. Climate change has far-reaching consequences for the living conditions of peoples around the world: inhabitable spaces shrink, scarce resources become scarcer, injustices grow deeper, not only between North and South but also between generations, storing up material for new social tensions and giving rise to violent conflicts, civil wars and massive refugee flows. Climate change poses major new challenges in terms of security, responsibility and justice, but as Welzer makes disturbingly clear, very little is being done to confront them. The paperback edition includes a new Preface that brings the book up to date and addresses the most recent developments and trends.

---

#### THE NEW CLIMATE WAR

---

---

#### THE FIGHT TO TAKE BACK OUR PLANET

---

Hachette UK Shortlisted for the FT/McKinsey Business Book of the Year award A renowned climate scientist shows how fossil fuel companies have waged a thirty-year campaign to deflect blame and responsibility and delay action on climate change, and offers a battle plan for how we can save the planet. Recycle. Fly less. Eat less meat. These are some of the ways that we've been told can slow climate change. But the inordinate emphasis on individual behavior is the result of a marketing campaign that has succeeded in placing the responsibility for fixing climate change squarely on the shoulders of individuals. Fossil fuel companies have followed the example of other industries deflecting blame (think "guns don't kill people, people kill people") or greenwashing (think of the beverage industry's "Crying Indian" commercials of the 1970s). Meanwhile, they've blocked efforts to regulate or price carbon emissions, run PR campaigns aimed at discrediting viable alternatives, and have abdicated their responsibility in fixing the problem they've created. The result has been disastrous for our planet. In *The New Climate War*, Mann argues that all is not lost. He draws the battle lines between the people and the polluters-fossil fuel companies, right-wing plutocrats, and petrostates. And he outlines a plan for forcing our governments and corporations to wake up and make real change, including: A common-sense, attainable approach to carbon pricing- and a revision of the well-intentioned but flawed currently proposed version of the Green New Deal; Allowing renewable energy to compete fairly against fossil fuels Debunking the false narratives and arguments that have worked their way into the climate debate and driven a wedge between even those who support climate change solutions Combatting climate doomism and despair-mongering With immensely powerful vested interests aligned in defense of the fossil fuel status quo, the societal tipping point won't happen without the active participation of citizens everywhere aiding in the collective push forward. This book will reach, inform, and enable citizens everywhere to join this battle for our planet.

---

#### A STORY OF THE FUTURE

---

Penguin UK **\*\*SUNDAY TIMES AND THE NEW YORK TIMES BESTSELLER\*\*** 'An epoch-defining book' Matt Haig 'If you read just one work of non-fiction this year, it should probably be this' David Sexton, Evening Standard Selected as a Book of the Year 2019 by the Sunday Times, Spectator and New Statesman A Waterstones Paperback of the Year and shortlisted for the Foyles Book of the Year 2019 Longlisted for the PEN / E.O. Wilson Literary Science Writing Award It is worse, much worse, than you think. The slowness of climate change is a fairy tale, perhaps as pernicious as the one that says it isn't happening at all, and if your anxiety about it is dominated by fears of sea-level rise, you are barely scratching the surface of what terrors are possible, even within the lifetime of a teenager today. Over the past decades, the term "Anthropocene" has climbed into the popular imagination - a name given to the geologic era we live in now, one defined by human intervention in the life of the planet. But however sanguine you might be about the proposition that we have ravaged the natural world, which we surely have, it is another thing entirely to consider the possibility that we have only provoked it, engineering first in ignorance and then in denial a climate system that will now go to war with us for many centuries, perhaps until it destroys us. In the meantime, it will remake us, transforming every aspect of the way we live-the planet no longer nurturing a dream of abundance, but a living nightmare.

#### HANDBOOK ON MIGRATION AND SECURITY

---

Edward Elgar Publishing This Handbook provides a state-of-the-art analysis of the critically important links between migration and security in a globalising world, and presents original contributions suggesting innovative and emerging frontiers in the study of the securitization of migration. Experts from different fields reflect on their respective conceptualisations of the migration-security nexus, and consider how an interdisciplinary and multifaceted dialogue can stimulate and enrich our understanding of the securitisation of migration in the contemporary world.

#### LOSING EARTH

---

---

#### THE DECADE WE COULD HAVE STOPPED CLIMATE CHANGE

---

Pan Macmillan 'Nathaniel Rich's account starts in Washington in the 1990s and tells the story of how climate change could have been stopped back then, if only the powerful had acted. But they didn't want to.' - Observer By 1979, we knew all that we know now about the science of climate change - what was happening, why it was happening, and how to stop it. Over the next ten years, we had the very real opportunity to stop it. Obviously, we failed. Nathaniel Rich tells the essential story of why and how, thanks to the actions of politicians and businessmen, that failure came about. It is crucial to an understanding of where we are today. 'The excellent and appalling *Losing Earth* by Nathaniel Rich describes how close we came in the 70s to dealing with the causes of global warming and how US big business and Reaganite politicians in the 80s ensured it didn't happen. Read it.' - John Simpson 'An eloquent science history, and an urgent eleventh-hour call to save what can be saved.' - Nature 'To change the future, we must first understand our past, and *Losing Earth* is a crucial part of that when it comes to the environmental battles we're facing.' - Stylist

#### WHAT IF WE STOPPED PRETENDING?

---

HarperCollins UK The climate change is coming. To prepare for it, we need to admit that we can't prevent it.

---

#### CLIMATE CHANGE AS CLASS WAR

---

---

#### BUILDING SOCIALISM ON A WARMING PLANET

---

Verso Books How to build a movement to confront climate change The climate crisis is not primarily a problem of 'believing science' or individual 'carbon footprints' - it is a class problem rooted in who owns, controls and profits from material production. As such, it will take a class struggle to solve. In this ground breaking class analysis, Matthew T. Huber argues that the carbon-intensive capitalist class must be confronted for producing climate change. Yet, the narrow and unpopular roots of climate politics in the professional class is not capable of building a movement up to this challenge. For an alternative strategy, he proposes climate politics that appeals to the vast majority of society: the working class. Huber evaluates the Green New Deal as a first attempt to channel working class material and ecological interests and advocates building union power in the very energy system we need to dramatically transform. In the end, as in classical socialist movements of the early 20th Century, winning

the climate struggle will need to be internationalist based on a form of planetary working class solidarity.

### **TOXIN FEARS - WE COULD ALL BE DEAD IN 50YEARS.**

---

---

### **NEW CLIMATE CHANGE FACTS WRAPPED IN RIVETING STORIES, EXCITING TO READ.**

---

Discover real Global Warming Truth and Climate Change Facts that make you cringe and surprise you. Highly entertaining. Yell: "Holy sh\*\*!" and then another thriller-like episode draws you in deep..... Shocking, fascinating, new facts that are riveting, compelling and disturbing on many levels. Global Warming Pollution leads to war, it already did, and it is happening again, and we have a lot more to come. When the truth gets uncomfortable, you know you're reading the right book. This book is a dystopian thriller that shows you the business and money in our pollution policies that read like a true crime novel. I truly believe - after all my research - that we may only have about 50 years before our toxic destruction will tear us apart. The Paris Climate Accord is NOT gonna save us. We need more action, better solutions and more money. I will show you where and how to find all of those. This will be the most informative, entertaining and provoking book on Climate Change you will ever read and experience. Discover what you never heard before, connections you never knew about and see surprising solutions. The first chapter alone will blow you away. Terror attacks and murder suicide wrapped in global warming, while providing the latest truth on our Climate Crisis. Captivating, educational, fantastic to read and it inspires and motivates to take action. You thought Covid-19 was bad in 2020? Wait until you see what 3 degrees of warming will do to you, your kids, your family, your relationships etc. The things you learn in this book will make Covid-19 look like a vacation in paradise. We're racing to our own end and the Pentagon is preparing for the worst. The political conservative and liberalism approach both have to face the truth sooner or later, we really may only have 50years left. Real climate crisis solutions are in this book. It clearly lays out the climatology issues by showing you the truth. People are killing each other over fish, and we did that to them. Our toxins and pollution are the reason for terrorist groups and Mediterranean refugees, Cruise Ships kill our oceans and container boats take the absolute cake on the global toxin terror list. No beating around the bush and straight to the point, without the science jargon. See the important Environmental Studies you need to know about, in short version. You can still file this under suspense, thriller, mysteries and you would have to admit that nothing is scarier than your own helplessness in face of imminent danger. Many Global Warming best sellers avoid talking about war, they don't want to tell you the truth. Climate Wars started because of our pollution crisis - the only mystery is the fact that most people don't understand the connections. This suspense thriller is happening in your lifetime, right now, and you have the power to stop it and save your children. If you wander through the obstacle course of truth about pollution and our climate crisis, trying to avoid facts and scientific studies, you will end up hitting more trees than a blind Tarzan. And no QAnon or Republican or Democratic conspiracies on reducing pollution will change the facts, no matter how unbelievable they appear. A simple Universal Basic Income, UBI, crypto currency smart contracts and just a little bit of financial understanding can easily save our planet, from ourselves. Here are real feasible solutions. Learn more about coal, gas, oil, wave energy, solar energy, wind farms, wind generators, bug farms, insect protein, as well as CO2 levels, methane emissions, the ISIS connection to global warming, how droughts and famine influenced the Arab Spring, the green new deal and so much more.

### **HOW TO PREPARE FOR CLIMATE CHANGE**

---

---

### **A PRACTICAL GUIDE TO SURVIVING THE CHAOS**

---

Simon & Schuster A practical and comprehensive guide to surviving the greatest disaster of our time, from New York Times bestselling self-help author and beloved CBS Sunday Morning science and technology correspondent David Pogue. You might not realize it, but we're already living through the beginnings of climate chaos. In Arizona, laborers now start their day at 3 a.m. because it's too hot to work past noon. Chinese investors are snapping up real estate in Canada. Millennials have evacuation plans. Moguls are building bunkers. Retirees in Miami are moving inland. In How to Prepare for Climate Change, bestselling self-help author David Pogue offers sensible, deeply researched advice for how the rest of us should start to ready ourselves for the years ahead. Pogue walks readers through what to grow, what to eat, how to build, how to insure, where to invest, how to prepare your children and pets, and even where to consider relocating when the time comes. (Two areas of the country, in particular, have the requisite cool temperatures, good hospitals, reliable access to water, and resilient infrastructure to serve as climate havens in the years ahead.) He also provides wise tips for managing your anxiety, as well as action plans for riding out every climate catastrophe, from superstorms and wildfires to ticks and epidemics. Timely and enlightening, How to Prepare for Climate Change is an indispensable guide for anyone who read The Uninhabitable Earth or The Sixth Extinction and wants to know how to make smart choices for the upheaval ahead.

### **CREATING A CLIMATE FOR CHANGE**

---

---

### **COMMUNICATING CLIMATE CHANGE AND FACILITATING SOCIAL CHANGE**

---

Cambridge University Press The need for effective communication, public outreach and education to increase support for policy, collective action and behaviour change is ever present, and is perhaps most pressing in the context of anthropogenic climate change. This book is the first to take a comprehensive look at communication and social change specifically targeted to climate change. It is a unique collection of ideas examining the challenges associated with communicating climate change in order to facilitate societal response. It offers well-founded, practical suggestions on how to communicate climate change and how to approach related social change more effectively. The contributors of this book come from a diverse range of backgrounds, from government and academia to non-governmental and civic sectors of society. The book is accessibly written, and any specialized terminology is explained. It will be of great interest to academic researchers and professionals in climate change, environmental policy, science communication, psychology, sociology and geography.

---

### **FALSE ALARM**

---

---

### **HOW CLIMATE CHANGE PANIC COSTS US TRILLIONS, HURTS THE POOR, AND FAILS TO FIX THE PLANET**

---

Hachette UK The New York Times-bestselling "skeptical environmentalist" argues that panic over climate change is causing more harm than good. Hurricanes batter our coasts. Wildfires rage across the American West. Glaciers collapse in the Arctic. Politicians, activists, and the media espouse a common message: climate change is destroying the planet, and we must take drastic action immediately to stop it. Children panic about their future, and adults wonder if it is even ethical to bring new life into the world. Enough, argues bestselling author Bjorn Lomborg. Climate change is real, but it's not the apocalyptic threat that we've been told it is. Projections of Earth's imminent demise are based on bad science and even worse economics. In panic, world leaders have committed to wildly expensive but largely ineffective policies that hamper growth and crowd out more pressing investments in human capital, from immunization to education. False Alarm will convince you that everything you think about climate change is wrong -- and points the way toward making the world a vastly better, if slightly warmer, place for us all.

---

### **CLIMATE CHANGE AND THE NATION STATE**

---

---

### **THE CASE FOR NATIONALISM IN A WARMING WORLD**

---

Oxford University Press, USA The climate emergency is intensifying, while international responses continue to falter. In Climate Change and the Nation State, Anatol Lieven outlines a revolutionary approach grounded in realist thinking. This involves redefining climate change as an existential threat to nation states - which it is - and mobilizing both national security elites and mass nationalism. He condemns Western militaries for neglecting climate change and instead prioritizing traditional but less serious threats. Lieven reminds us that nationalism is the most important force in motivating people to care about the wellbeing of future generations. The support of nationalism is therefore vital to legitimizing the sacrifices necessary to limit climate change and surviving and the effects of it (some of which are now inevitable). This will require greatly strengthened social and national solidarity across lines of class and race. Throughout, Lieven draws on historical examples to show how nationalism has helped enable past movements to implement progressive social reform. Lieven strongly supports plans for a "Green New Deal" in the USA and Europe. In order to implement and maintain such changes, however, it will be necessary to create dominant national consensus like those that enabled and sustained the original New Deal and welfare states in Europe. Lieven criticizes sections of the environmentalist left for hindering this by their hostility to national interests, their utopian political naiveté, their advancement of divisive cultural agendas, and their commitment to open borders. Radical and timely, Climate Change and the Nation State is an essential contribution to the debate on how to deal with a climatic crisis that if unchecked will threaten the survival of Western democracies and every organized human society.

---

### **APOCALYPSE NEVER**

---

---

### **WHY ENVIRONMENTAL ALARMISM HURTS US ALL**

---

HarperCollins Now a National Bestseller! Climate change is real but it's not the end of the world. It is not even our most serious environmental problem. Michael Shellenberger has been fighting for a greener planet for decades. He helped save the world's last unprotected redwoods. He co-created the predecessor to today's Green New Deal. And he led a successful effort by climate scientists and activists to keep nuclear plants operating, preventing a spike of emissions. But in 2019, as some claimed "billions of people are going to die," contributing to rising anxiety, including among adolescents, Shellenberger decided that, as a lifelong environmental activist, leading energy expert, and father of a teenage daughter, he needed to speak out to separate science from fiction. Despite decades of news

media attention, many remain ignorant of basic facts. Carbon emissions peaked and have been declining in most developed nations for over a decade. Deaths from extreme weather, even in poor nations, declined 80 percent over the last four decades. And the risk of Earth warming to very high temperatures is increasingly unlikely thanks to slowing population growth and abundant natural gas. Curiously, the people who are the most alarmist about the problems also tend to oppose the obvious solutions. What's really behind the rise of apocalyptic environmentalism? There are powerful financial interests. There are desires for status and power. But most of all there is a desire among supposedly secular people for transcendence. This spiritual impulse can be natural and healthy. But in preaching fear without love, and guilt without redemption, the new religion is failing to satisfy our deepest psychological and existential needs.

---

## DEATH OF ALL LIFE ON EARTH

---

### HOW HUMAN ZEAL AGAINST CLIMATE CHANGE CAUSED THE DEATH OF ALL LIFE

---

Trafford Publishing This is the first of four books about how humans won the war on carbon, and accidentally caused the death of all things living. When Carbon Dioxide began to decrease in the atmosphere, first the trees and plants didn't grow, then slowly died starting in high latitudes and working inexorably toward the equator. All of the wild and domestic animals were either killed for food or starved. In the course of a dozen years, billions of humans starved to death or were killed by "eaters." This story is about a young woman on whom every horrible, heart rending tragedy was heaped and yet she somehow, almost singlehandedly gave mankind a tiny chance of survival. Hang on tight to this apocalyptic tale as it drags you through hope and heartbreak then tragedy and finally triumph.

---

## WHY WE DISAGREE ABOUT CLIMATE CHANGE

---

### UNDERSTANDING CONTROVERSY, INACTION AND OPPORTUNITY

---

Cambridge University Press Climate change is not 'a problem' waiting for 'a solution'. It is an environmental, cultural and political phenomenon which is re-shaping the way we think about ourselves, our societies and humanity's place on Earth. Drawing upon twenty-five years of professional work as an international climate change scientist and public commentator, Mike Hulme provides a unique insider's account of the emergence of this phenomenon and the diverse ways in which it is understood. He uses different standpoints from science, economics, faith, psychology, communication, sociology, politics and development to explain why we disagree about climate change. In this way he shows that climate change, far from being simply an 'issue' or a 'threat', can act as a catalyst to revise our perception of our place in the world. Why We Disagree About Climate Change is an important contribution to the ongoing debate over climate change and its likely impact on our lives.

---

## CLIMATE CHANGE FROM A CRIMINOLOGICAL PERSPECTIVE

---

Springer Science & Business Media Few would dispute the power of climate change to lead to profoundly destructive weather events. At the same time, the possibility of climate change as a consequence—or even a cause—of criminal events is far less recognized. As the earth grows warmer, issues regarding land use, water rights, bio-security, and food production and distribution will continue to have far-reaching impact, and produce more opportunity for offenses by individuals and groups as well as political and corporate entities. In Climate Change from a Criminological Perspective, a panel of pioneering green criminologists investigates an increasingly complex chain of ecological causes and effects. Illegal acts are analyzed as they contribute to environmental decline (e.g., wildlife poaching) or result from ecological distress (e.g., survival-related theft). Regulatory and other interventions are critiqued, concepts of environmental harm refined, and new research methodologies called for. And while individual events described are mainly local, the contributors keep the global picture, and substantial questions about human rights and social relationships, firmly in mind. Topics featured include: Global warming as corporate crime. Climate change and the courts: U.S. and global views. Climate change, natural disasters, and gender inequality. The roles and responsibilities of environmental enforcement networks. A sociocultural perspective on climate change denial. PLUS: instructive in-depth chapters on criminological aspects of Hurricane Katrina and the Japanese nuclear disaster. A volume of considerable timeliness and vision, Climate Change from a Criminological Perspective will be read and discussed, and will inspire action, by researchers in criminology, criminal justice, environmental studies, and related disciplines, as well as policymakers.

---

## CLIMATE CHANGE AND AIR POLLUTION

---

### THE IMPACT ON HUMAN HEALTH IN DEVELOPED AND DEVELOPING COUNTRIES

---

Springer This book discusses regional and international climate-change, air-pollution and human-health scenarios. The research, from both industrialized and developing countries, focuses on region-specific perspectives of climate change impacts on air pollution. After analyzing the variations of climate data over recent decades, the authors consider the different effects of climate change on air pollution and health. As stressed by the IPCC, "pollen, smoke and ozone levels are likely to increase in a warming world, affecting the health of residents of major cities. Rising temperatures will worsen air quality through a combination of more ozone in cities, bigger wild fires and worse pollen outbreaks," according to a major UN climate report. The report follows the World Health Organization in finding that air pollution is the world's greatest environmental health risk, killing 7 million people in 2014 (compared to 0.4 million deaths due to malaria). Deteriorating air quality will most affect the elderly, children, people with chronic ill-health and expectant mothers. Another report suggests that more than 5.5 million people die prematurely each year due to air pollution with over half of those deaths occurring in China and India. A study on the air pollution in the USA suggests that more than half of US population lives in areas with potentially dangerous air pollution, and about six out of 10 of the top cities for air pollution in the USA are located in the state of California. In the face of future climate change, scientists have urged stronger emission controls to avoid worsening air pollution and the associated exacerbation of health problems, especially in more populated regions of the world. It is hoped that the implementation of the Paris Climate Agreement will help minimize air pollution. Additionally the authors consider the various measures that different countries and groups of countries, like the European Union, have adopted to mitigate the problems arising from climate change and to safeguard the health of population. The book examines the increasing incidence of diseases largely caused by climate change. The countries/regions covered in this study include the USA, Northern Europe (U.K.), Southern Europe (Italy), Canada, Australia, East Asia, Russia, Hong Kong, Taiwan, Thailand, Malaysia, Indonesia, India, South Africa, Mexico, Brazil, Caribbean countries, and Argentina.

---

## GLOBAL WARMING TRUTH

---

### CLIMATE CHANGE FACTS AND POLITICAL CORRUPTION WILL KILL US ALL

---

Terror attacks and murder suicide wrapped in global warming, while providing the latest facts. Captivating, educational, exciting to read. The first chapter alone will blow you away. Discover what you never heard before, connections you never knew about and see surprising solutions. No boring graphs, no boring lists, no science jargon. · \*Corrupt politicians and toxin terrorists · \*Terror attacks due to droughts · \*Boats are worse than all the cars on our planet · \*Animal agriculture is killing us all · \*Monetary system is forcing more pollution · \*Global Warming has caused wars and is creating many more The Paris Climate Accord is NOT gonna save us. We need more action, better solutions and more money. Find out how to make it happen. This will be the most informative, riveting and provoking book on Climate Change you will ever read. In less than 3 hours of reading you will know more about Global Warming and Climate Change causes, consequences and solutions than anyone you know. Highly entertaining thriller episodes and fascinating stories help you understand how bad it really is. We produced more CO2 in the last 30 years than in all the previous 800,000 years combined. You will find some unpleasant and cringe-worthy sections in here that provide unusual entertainment value, that you haven't experienced in this genre before.

---

## EVELINA

---

### THE ALPHA

---

David Gomadza A suspenseful romantic action-packed thriller. A gorgeous young lady turned Most Wanted. A romantic trip and a love to die for. A hidden secret. An evil brutal regime practicing a cult they believe existed even before God created the world. Until the regime is stopped life is on the line. A must read. ABOUT THE SERIES EVELINA A secret cult that existed even before this world was created is still at the center of murder a thousand years later. A ruthless regime is using this cult to run rampage and havoc. A corrupt and evil world where murder is the norm. A place so dark and scary where they all come out in numbers where they are slaughtered in thousands. A place where they are naked:-no rights, hopes, or anything to hang on to. A place where the only hope and courage is the heart-engraved-belief that someone will solve God's Dilemma and rise to save humanity. A pledge to fight to the death because the sole existence of the regime is to restore the lost kingdom of darkness at humanity's expense. Where restoring it means slaughtering two-thirds of the world's population in 48 hours known as the 48 Hours of Darkness. It's a story of great courage in the face of death. The rise of Tomorrow's World Order citing the system as the root of all evil setting a collision course with the regime. The suspenseful questions are when and of what magnitude will the collision be and the devastating outcome? Will the regime allow a system change? Where stakes are high and the regime will defend the system at any cost will they succeed and at what cost? How can mankind survive the most feared devil's ghosts? Are you to be the lucky few to be spared in the 48 hours of darkness? Is mankind doomed or there is hope? What is God's Dilemma and can it really be solved? Unless God's Dilemma is solved mankind is doomed. A race against time where it's a matter of life or death for the strongest men let alone for Evelina caught up in all this. Will she survive the greatest manhunt since the world was created with everyone after her with the most powerful man demanding her too? Only one way to find out. Get this book right now.

---

## HOW TO AVOID A CLIMATE DISASTER

---

### THE SOLUTIONS WE HAVE AND THE BREAKTHROUGHS WE NEED

---

Penguin UK In this urgent, authoritative book, Bill Gates sets out a wide-ranging, practical - and accessible - plan for how the world can get to zero greenhouse gas emissions in time to avoid a climate catastrophe. Bill Gates has spent a decade investigating the causes and effects of climate change. With the help of experts in the fields of physics, chemistry, biology, engineering, political science, and finance, he has focused on what must be done in order to stop the planet's slide toward certain environmental disaster. In this book, he not only explains why we need to work toward net-zero emissions of greenhouse gases, but also details what we need to do to achieve this profoundly important goal. He gives us a clear-eyed description of the challenges we face. Drawing on his understanding of innovation and what it takes to get new ideas into the market, he describes the areas in which technology is already helping to reduce emissions, where and how the current technology can be made to function more effectively, where breakthrough technologies are needed, and who is working on these essential innovations. Finally, he lays out a concrete, practical plan for achieving the goal of zero emissions—suggesting not only policies that governments should adopt, but what we as individuals can do to keep our government, our employers, and ourselves accountable in this crucial enterprise. As Bill Gates makes clear, achieving zero emissions will not be simple or easy to do, but if we follow the plan he sets out here, it is a goal firmly within our reach.

## CLIMATE CHANGE AND POST-POLITICAL COMMUNICATION

---

---

## MEDIA, EMOTION AND ENVIRONMENTAL ADVOCACY

---

Routledge For many years, the objective of environmental campaigners was to push climate change on to the agenda of political leaders and to encourage media attention to the issue. By the first decade of the twenty-first century, it appeared that their efforts had been spectacularly successful. Yet just at the moment when the campaigners' goals were being achieved, it seemed that the idea of getting the issue into mainstream discussion had been mistaken all along; that the consensus-building approach produced little or no meaningful action. That is the problem of climate change as a 'post-political' issue, which is the subject of this book. Examining how climate change is communicated in politics, news media and celebrity culture, *Climate Change and Post-Political Communication* explores how the issue has been taken up by elites as potentially offering a sense of purpose or mission in the absence of political visions of the future, and considers the ways in which it provides a focus for much broader anxieties about a loss of modernist political agency and meaning. Drawing on a wide range of literature and case studies, and taking a critical and contextual approach to the analysis of climate change communication, this book will be a valuable resource for students and scholars of environmental studies, communication studies, and media and film studies.

## BODY COUNT

---

---

## HOW CLIMATE CHANGE IS KILLING US

---

Simon and Schuster Suddenly, when the country caught fire, people realised what the government has not: that climate change is killing us. But climate deaths didn't start in 2019. Medical officers have been warning of a health emergency as temperatures rise for years, and for at least a decade Australians have been dying from the plagues of climate change – from heat, flood, disease, smoke. And now, pandemic. In this detailed, considered, compassionate book, Paddy Manning paints us the big picture. He revisits some headline events which might have faded in our memory – the Brisbane Floods of 2011; Melbourne's thunderstorm asthma fatalities of 2016 – and brings to our attention less well-publicised killers: the soil-borne diseases that amplify after a flood; the fact that heat itself has killed more people than all other catastrophes put together. In each case, he has interviewed scientists to explore the link to climate change and asks how – indeed, whether – we can better prepare ourselves in the future. Most importantly, Manning has spoken to survivors and the families of victims, creating a monument to those we have already lost. Donna Rice and her 13-year-old son Jordan. Alison Tenner. The Buchanan family. These are stories of humans at their most vulnerable, and also often at their best. In extremis, people often act to save their loved ones above themselves. As *Body Count* shows, we are now all in extremis, and it is time to act. Respected journalist Paddy Manning tells these stories of tragedy and loss, heroism and resilience, in a book that is both monument and warning. WINNER of the Victorian Premier's Literary Award for Non-Fiction 2021 Longlisted for the 2020 Walkley Book Award 'Body Count puts a human face on the lives impacted by our worsening climate crisis. Most apparent from *Body Count* is the sense of community throughout the book. These stories of heroism and hope provide a silver lining...' FIVE STARS, Good Reading 'Manning looks to past natural disasters that inform present conditions. His journalistic training allows for nuance: there's space set aside to discuss climate change sceptics and deniers even as his central these is unequivocal: that "as the planet hots up, the mercury's grim harvest will threaten more of us". Dedicated to the loved ones of those who've lost their lives in the stories told within, *Body Count* is at its heart an urgent and passionate rallying call.' The Saturday Paper 'A climate emergency tour de force.' Dr Bob Brown 'True stories of heroism and unimaginable loss...*Body Count* is a brilliant exposition of why we must deal with the climate problem now.' Ross Garnaut 'Climate change kills. ... Through the accounts of people who have lost so much, Paddy Manning drives home the deeply personal impact of climate change. Governments continue to ignore the impact on climate change on human health at OUR peril. The future of our planet and our future generations depends on everyone playing their part, today.' Professor Kerryn Phelps 'A stunningly powerful call to political leaders everywhere who hear the warnings of the devastating impacts of climate change on health but fail to act.' Dr Helen Haines, independent member for Indi 'Moving stories of heroic courage and tragic loss. A pause to reflect on the lives lost and how urgently we need change.' David Pocock, former Wallabies captain

## MERCHANTS OF DOUBT

---

---

## HOW A HANDFUL OF SCIENTISTS OBSCURED THE TRUTH ON ISSUES FROM TOBACCO SMOKE TO GLOBAL WARMING

---

A&C Black The U.S. scientific community has long led the world in research on such areas as public health, environmental science, and issues affecting quality of life. These scientists have produced landmark studies on the dangers of DDT, tobacco smoke, acid rain, and global warming. But at the same time, a small yet potent subset of this community leads the world in vehement denial of these dangers. *Merchants of Doubt* tells the story of how a loose-knit group of high-level scientists and scientific advisers, with deep connections in politics and industry, ran effective campaigns to mislead the public and deny well-established scientific knowledge over four decades. Remarkably, the same individuals surface repeatedly—some of the same figures who have claimed that the science of global warming is "not settled" denied the truth of studies linking smoking to lung cancer, coal smoke to acid rain, and CFCs to the ozone hole. "Doubt is our product," wrote one tobacco executive. These "experts" supplied it. Naomi Oreskes and Erik M. Conway, historians of science, roll back the rug on this dark corner of the American scientific community, showing how ideology and corporate interests, aided by a too-compliant media, have skewed public understanding of some of the most pressing issues of our era.

## CLIMATE CHANGE

---

---

## CLIMATE SCIENCE FACTS AND FICTION, AND TACKLING GLOBAL WARMING

---

CLIMATE CHANGE: Climate Science Facts & Fiction, & Tackling Global Warming Climate change is here. And it looks as though it is going to stay. We are experiencing its effects already, but the evidence suggests that matters will only get worse. Those following the news this year, in 2017, will be familiar with the impact of hurricanes on the northern West Indies. Nations have been destroyed, people killed as landfall was made by successive storms in a short period. The small island of Barbuda in particular suffered devastation. There was a very significant satellite image of the region reproduced in numerous newspapers. It showed a line of three hurricanes, the first having passed the West Indies, the second over it, north of Cuba, and the third about to hit. Climate change is already a serious threat to the lives of mankind. And, indeed as we will see later in this book, every other living occupant of the planet. Your reading will offer an insight into the causes and effects of climate change. It will provide case studies alongside practical guides as to how we can all help. It will also look at the climate change deniers, that group of often powerful people who fly in the face of accepted research in an attempt to justify their continued use of fossil fuel. They frequently seek justification for their pumping of greenhouse gases into the atmosphere. If, like many people, you are already concerned by the risks of climate change, this book will provide hard evidence to support your worries. If you are a denier, it will aim to present enough information to make you question your views.

## CLIMATE CHANGE (A LADYBIRD EXPERT BOOK)

---

Penguin UK Part of the new Ladybird Expert series, *Climate Change* is a clear, simple and enlightening introduction to one of the most important issues facing our world today. From HRH The Prince of Wales, environmentalist Tony Juniper and climate scientist Dr Emily Shuckburgh, it explains the history, dangers and challenges of global warming and explores possible solutions with which to reduce its impact. You'll learn about the causes and consequences of climate disruption; heatwaves, floods and other extreme weather; disappearing wildlife; acid oceans; the benefits of limiting warming; sustainable farming, new clean technologies and the circular economy. Written by the leading lights and most outstanding communicators in their fields, the Ladybird Expert books provide clear, accessible and authoritative introductions to subjects drawn from science, history and culture. Other books currently available in the Ladybird Expert series include: · Quantum Mechanics · Evolution For an adult readership, the Ladybird Expert series is produced in the same iconic small hardback format pioneered by the original Ladybirds. Each beautifully illustrated book features the first new illustrations produced in the original Ladybird style for nearly forty years.

## DON'T EVEN THINK ABOUT IT

---

---

## WHY OUR BRAINS ARE WIRED TO IGNORE CLIMATE CHANGE

---

Bloomsbury Publishing USA From the founder of the Climate Outreach and Information Network, a groundbreaking take on the most urgent question of our time: Why, despite overwhelming scientific evidence, do we still ignore climate change? "Please read this book, and think about it." --Bill Nye Most of us recognize that climate change is real, and yet we do nothing to stop it. What is this psychological mechanism that allows us to know something is true but act as if it is not? George Marshall's search for the answers brings him face to face with Nobel Prize-winning psychologists and the activists of the Texas Tea Party; the world's leading climate scientists and the people who denounce them; liberal environmentalists and conservative evangelicals. What he discovered is that our values, assumptions, and prejudices can take on lives of their own, gaining authority as they are shared, dividing people in their wake. With engaging stories and drawing on years of his own research, Marshall argues that the answers do not lie in the things that make us different and drive us apart, but rather in what we all share: how our human brains are wired—our evolutionary origins, our perceptions of threats, our cognitive blindspots, our love of storytelling, our fear of death, and our deepest instincts to defend our family and tribe. Once we understand what excites, threatens, and motivates us, we can rethink and reimagine climate change, for it is not an impossible problem. Rather, it is one we can halt if we can make it our common purpose and common ground. Silence and inaction are the most persuasive of narratives, so we need to change the story. In the end, *Don't Even Think About It* is both about climate change and about the qualities that make us human and how we can grow as we deal with the greatest challenge we have ever faced.

## GLOBAL TRENDS 2040

---

### A MORE CONTESTED WORLD

---

Cosimo Reports "The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

### THE FUTURE OF HERITAGE AS CLIMATES CHANGE

---

#### LOSS, ADAPTATION AND CREATIVITY

---

Routledge Climate change is a critical issue for heritage studies. Sites, objects and ways of life all are coming under threat, requiring alternative management, or requiring specific climate change adaptation. Heritage is key to interpreting the societal significance of climate change; notions (and images) of the past are crucial to our understanding of the present, and are used to prompt actions that help society define and achieve a specific and desired future. Relatively little attention has been paid to the critical intersections between heritage and climate change. The Future of Heritage as Climates Change frames the intellectual context within which heritage and climate change can be examined, presenting cases and sub-fields in which the heritage-climate change nexus is being examined and provides synthetic analyses through five overarching themes: The heritage of change among coastal communities; liminality and the politics of engagement Dwelling materials: processes and possibilities; Environmental heritage: meanings of the past - prospects for the future; Blurring the boundaries of nature and culture: the politics of anticipation; Climate change and heritage practice: adaptation and resilience. The Future of Heritage as Climates Change provides scholars, managers, policy makers and students with a much needed examination of heritage and climate change to help make critical decisions in the next several decades.

### PHILOSOPHICAL FOUNDATIONS OF CLIMATE CHANGE POLICY

---

Oxford University Press "Although the task of formulating an appropriate policy response to the problem of anthropogenic climate change is one that raises a number of very difficult normative issues, environmental ethicists have not played an influential role in government deliberations. This is primarily due to their rejection of many of the assumptions that structure the debates over policy. This book offers a philosophical defense of these assumptions, in order to overcome the major conceptual barriers to the participation of philosophers in these debates. There are five important barriers: First, the policy debate presupposes a stance of liberal neutrality, as a result of which it does not privilege any particular set of environmental values over other concerns. Second, it assumes ongoing economic growth, along with a commitment to what is sometimes called a weak sustainability framework when analyzing the value of the bequest being made to future generations. Third, it treats climate change as fundamentally a collective action problem, not an issue of distributive justice. Fourth, there is the acceptance of cost-benefit analysis, or more precisely, the view that a carbon pricing regime should be guided by our best estimate of the social cost of carbon. And finally, there is the view that when this calculation is undertaken, it is permissible to discount costs and benefits, depending on how far removed they are from the present. This book attempts to make explicit and defend these presuppositions, and in so doing offer philosophical foundations for the debate over climate change policy"--

### THE CLIMATE WAR

---

#### TRUE BELIEVERS, POWER BROKERS, AND THE FIGHT TO SAVE THE EARTH

---

Hachette UK In The Climate War, Eric Pooley--deputy editor of Bloomberg BusinessWeek--does for global warming what Bob Woodward did for presidents and Lawrence Wright did for terrorists. In this epic tale of an American civil war, Pooley takes us behind the scenes and into the hearts and minds of the most important players in the struggle to cap global warming pollution--a fight in which trillions of dollars and the fate of the planet are at stake. Why has it been so hard for America to come to grips with climate change? Why do so many people believe it isn't really happening? As President Obama's science advisor John Holdren has said, "We're driving in a car with bad brakes in a fog and heading for a cliff. We know for sure that cliff is out there. We just don't know exactly where it is. Prudence would suggest that we should start putting on the brakes." But powerful interests are threatened by the carbon cap that would speed the transition to a clean energy economy, and their agents have worked successfully to deny the problem and delay the solutions. To write this book, Pooley, the former managing editor of Fortune and chief political correspondent for Time, spent three years embedded with an extraordinary cast of characters: from the flamboyant head of one of the nation's largest coal-burning energy companies to the driven environmental leader who made common cause with him, from leading scientists warning of impending catastrophe to professional skeptics disputing almost every aspect of climate science, from radical activists chaining themselves to bulldozers to powerful lobbyists, media gurus, and advisors in Obama's West Wing--and, to top it off, unprecedented access to former Vice President Al Gore and his team of climate activists. Pooley captures the quiet determination and even heroism of climate campaigners who have dedicated their lives to an uphill battle that's still raging today. He asks whether we have what it takes to preserve our planet's habitability, and shows how America's climate war sends shock waves from Bali to Copenhagen. No other reporter enjoys such access to this cast of characters. No other book covers this terrain. From the trenches of a North Carolina power plant to the battlefields of Capitol Hill, Madison Avenue, and Wall Street, The Climate War is the essential read for anyone who wants to understand the players and politics behind the most important issue we face today.

---

### THE HOCKEY STICK AND THE CLIMATE WARS

---

#### DISPATCHES FROM THE FRONT LINES

---

Columbia University Press The ongoing assault on climate science in the United States has never been more aggressive, more blatant, or more widely publicized than in the case of the Hockey Stick graph—a clear and compelling visual presentation of scientific data, put together by Michael E. Mann and his colleagues, demonstrating that global temperatures have risen in conjunction with the increase in industrialization and the use of fossil fuels. Here was an easy-to-understand graph that, in a glance, posed a threat to major corporate energy interests and those who do their political bidding. The stakes were simply too high to ignore the Hockey Stick—and so began a relentless attack on a body of science and on the investigators whose work formed its scientific basis. The Hockey Stick achieved prominence in a 2001 UN report on climate change and quickly became a central icon in the “climate wars.” The real issue has never been the graph’s data but rather its implied threat to those who oppose governmental regulation and other restraints to protect the environment and planet. Mann, lead author of the original paper in which the Hockey Stick first appeared, shares the story of the science and politics behind this controversy. He reveals key figures in the oil and energy industries and the media front groups who do their bidding in sometimes slick, sometimes bare-knuckled ways. Mann concludes with the real story of the 2009 “Climategate” scandal, in which climate scientists’ emails were hacked. This is essential reading for all who care about our planet’s health and our own well-being.
