Introduction to Finance Due to ongoing advancements in technology, new legislation, and other innovations, the field of finance is rapidly changing. Developments in financial markets and investments necessitate that students be exposed to these topics as well as to financial management, the traditional focus of the introductory finance course. Introduction to Finance develops the three components of finance in an interactive framework that is consistent with the responsibilities of all financial professionals, managers, intermediaries, and investors in today's economy. To show the interrelationships between the areas of finance, the text emphasizes how investor activities monitor firms and focuses on the role of financial markets in channeling funds from investors to firms.

Principles of Finance Holt Rinehart & Winston The first course in finance for finance and business majors has traditionally focused solely on managerial (or corporate) finance. Now, many schools are indicating a need to introduce these students -- particularly the non-finance business majors -- to the other two major components of finance -- institutions and investments -- in this first course but at the same level of rigot as traditional financial management texts. The Dryden Press has answered this call with Principles of Finance. This text begins with a discussion of the principles of financial systems and business organizations, moves on to valuation concepts, and then corporate decision making (managerial finance). It concludes with coverage of investment fundamentals. Key chapters may be covered in a one-term course or supplemented with cases and outside readings for a two-term course. Chapters are written in a flexible, modular format, allowing instructors to cover the material in a different sequence if desired.
