Standards for the International Exchange of Bibliographic Information

Papers Presented at a Course Held at the School of Library, Archive and Information Studies, University College London, 3-18 August 1990

London : Library Association A collection of papers delivered at a course designed to give librarians and other information professionals an insight into the standards which exist, the bodies which make and promote them and the technology which exploits them. The contributors consider the major international bodies concerned with standards, the problems associated with special forms and different scripts and the creation of bibliographic records, including the role of national bibliographic agencies, standards for subject access and the importance of automation.

Guidelines for Subject Access in National Bibliographies

Walter de Gruyter In a networked and globalized world of information the form of national bibliographies may have changed, however their major function remains unchanged: to inform about a country's publication landscape, its cultural and intellectual heritage. Subject access offers a major route into this landscape providing information about the dispersion of publications in specific fields of knowledge and topics contained in a particular national publishing output. The Guidelines for Subject Access in National Bibliographies give graded recommendations concerning subject indexing policies for national bibliographic agencies and illustrating various policies by providing best practice examples.

National Bibliographies in the Digital Age

Guidance and New Directions

Walter de Gruyter The changes brought about by the World Wide Web and the explosion of electronic media have called into question many of the assumptions on which national bibliographies have been founded. The need was growing of a route map to navigate through unchartes territories. After a preparation period of several years, IFLAs Bibliography Section endorsed this large set of guidelines. They seek to help national bibliographic agencies improve their bibliographic services. Many examples and references are included. "

Bibliographic Control in the Digital Ecosystem

Firenze University Press With the contributions of international experts, the book aims to explore the new boundaries of universal bibliographic control. Bibliographic control is radically changing because the bibliographic universe is radically changing: resources, agents, technologies, standards and practices. Among the main topics addressed: library cooperation networks; legal deposit; national bibliographies; new tools and standards (IFLA LRM, RDA, BIBFRAME); authority control and new alliances (Wikidata, Wikibase, Identifiers); new ways of indexing resources (artificial intelligence); institutional repositories; new book supply chain; "discoverability" in the IIIF digital ecosystem; role of thesauri and ontologies in the digital ecosystem; bibliographic control and search engines.

Subject Access

Preparing for the Future

Walter de Gruyter This volume contains the proceedings of a special conference held in Florence, August 2009. The theoretical and methodological aspects of rethinking semantic access to information and knowledge are explored. Innovative projects deployed to cope with the challenges of the future are presented and discussed. This book offers a unique opportunity for librarians and other information professionals to get acquainted with the state of the art in subject indexing.

Functional Requirements for Subject Authority Data (FRSAD)

A Conceptual Model

Walter de Gruyter The purpose of authority control is to ensure consistency in representing a value - a name of a person, a place name, or a term or code representing a subject - in the elements used as access points in information retrieval. The primary purpose of this study is to produce a framework that will provide a clearly stated and commonly shared understanding of what the subject authority data/record/file aims to provide information about, and the expectation of what such data should achieve in terms of answering user needs."

Subject Access to Information: An Interdisciplinary Approach

An Interdisciplinary Approach

ABC-CLIO Drawing on the research of experts from the fields of computing and library science, this ground-breaking work will show you how to combine two very different approaches to classification to create more effective, user-friendly information-retrieval systems. • Provides an interdisciplinary overview of current and potential approaches to organizing information by subject • Covers both pure computer science and pure library science topics in easy-to-understand language accessible to audiences from both disciplines • Reviews technological standards for representation, storage, and retrieval of varied knowledge-organization systems and their constituent elements • Suggests a collaborative approach that will reduce duplicate efforts and make it easier to find solutions to practical problems

Functional Requirements for Bibliographic Records (FRBR)

Hype or Cure-All?

Routledge Get the straight facts on FRBR—and whether it is right for you! In 1998, Functional Requirements for Bibliographic Records (FRBR) was a conceptual model promoted by the International Federation of Library Associations and Institutions (IFLA) as being the recommended new advancement in cataloging. As libraries strive to serve their users better in the coming years, questions remain as to whether FRBR may provide an answer on how to improve cataloging systems. Functional Requirements for Bibliographic Records (FRBR): Hype or Cure-All? explores not only the theoretical issues, such as the concept of "works" and the bibliographic relationships of musical works, but also provides a unique survey of most of the systems that actually implement FRBR such as the AustLit Gateway. This book describes the challenges that accompany implementation of FRBR, and how this abstract approach to cataloging can be a useful, practical tool to help improve library systems. Functional Requirements for Bibliographic Records (FRBR): Hype or Cure-All? clearly explains the concepts, ideas, and practical applications of FRBR. The book is comprised of four major sections. A chronological section explains how FRBR was developed and how it will evolve in the future; a theoretical section reviews how FRBR analyzes different types of library materials; a practical aspects section examines how some systems actually use FRBR; and lastly, a section that explains an alternative to FRBR—the XOBIS project—which shows that other solutions are possible to meet future cataloging challenges. Functional Requirements for Bibliographic Records (FRBR) explores: innovative features, including the "Semantic Web" activities future evolutions in cataloging alternatives to FRBR the history of IFLA Functional Requirements for Bibliographic Records Study an updated description of the entity-relationship model being developed by the Working Group to extend the FRBR model to cover authority data key aspects of the FRBR and FRANAR models that will need to be re-examined the concept of expression the cataloging of hand press materials the AustLit Gateway musical works in the FRBR model the Paradigma Project at the National Library of Norway the FRBR and the performing arts oral traditions and FRBR the design of future systems the European FRBR research

Walter de Gruyter The UNIMARC Authorities Format was designed in the early 1990s to allow the creation of authority and reference records for the management of controlled access points in a bibliographic database. Incorporated in this work is relevant information from other IFLA working groups and from UNIMARC users. It is published under the auspices of the IFLA Cataloguing Section. This is the 3rd, completely updated and enlarged edition.

Includes the final report and resolutions along with agenda, working and background papers. Topics addressed include access to information by particular groups such as the Aboriginal community and the disabled, and preservation of material. Refers to a range of types of documentation such as cartographic material, microforms, machine-readable records, theses, and oral history and folklore.

Union Catalogues of Serials, Guidelines for Creation and Maintenance, with Recommended Standards for Bibliographic and Holdings Control

Psychology Press Union Catalogue of Serials presents the practical optimum for the design, compilation, and maintenance of world-wide standardized union cataloging activities. Particularly valuable for networks, bibliographic agencies, and institutions planning the establishment of a new, or the improvement of an existing, union catalogue of serials. Although the need for common standards in union cataloging has always been recognized, no single set of rules with universal applicability existed--until the publication of this exciting volume. These guidelines introduce codes of good practice and recommended standards for bibliographic and holdings control to be used in the creation and maintenance of union catalogues of serials, bearing in mind the requirements for international exchange. All countries can benefit from the universal relevance provided in these guidelines for improving physical and bibliographic access to serials resources and in making the most of opportunities provided by computerized production. This practical volume gives useful guidance on the components in the preparation and production of a union catalogue of serials, the administrative machinery required to bring each project to fruition, and the interface with other serials control systems and other information networks.

Clinical Practice Guidelines We Can Trust

National Academies Press Advances in medical, biomedical and health services research have reduced the level of uncertainty in clinical practice. Clinical practice guidelines (CPGs) complement this progress by establishing standards of care backed by strong scientific evidence. CPGs are statements that include recommendations intended to optimize patient care. These statements are informed by a systematic review of evidence and an assessment of the benefits and costs of alternative care options. Clinical Practice Guidelines We Can Trust examines the current state of clinical practice guidelines and how they can be improved to enhance healthcare quality and patient outcomes. Clinical practice guidelines now are ubiquitous in our healthcare system. The Guidelines International Network (GIN) database currently lists more than 3,700 guidelines from 39 countries. Developing guidelines presents a number of challenges including lack of transparent methodological practices, difficulty reconciling conflicting guidelines, and conflicts of interest. Clinical Practice Guidelines We Can Trust explores questions surrounding the quality of CPG development processes and the establishment of standards. It proposes eight standards for developing trustworthy clinical practice guidelines emphasizing transparency; management of conflict of interest ; systematic review--guideline development intersection; establishing evidence foundations for and rating strength of guideline recommendations; articulation of recommendations; external review; and updating. Clinical Practice Guidelines We Can Trust shows how clinical practice guidelines can enhance clinician and patient decision-making by translating complex scientific research findings into recommendations for clinical practice that are relevant to the individual patient encounter, instead of implementing a one size fits all approach to patient care. This book contains information directly related to the work of the Agency for Healthcare Research and Quality (AHRQ), as well as various Congressional staff and policymakers. It is a vital resource for medical specialty societies, disease advocacy groups, health professionals, private and international organizations that develop or use clinical practice guidelines, consumers, clinicians, and payers.

International Encyclopedia of Information and Library Science

Routledge The International Encyclopedia of Information and Library Science was published to widespread acclaim in 1996, and has become the major reference work in the field. This eagerly awaited new edition has been fully revised and updated to take full account of the many and radical changes which have taken place since the Encyclopedia was originally conceived. With nearly 600 entries, written by a global team of over 150 contributors, the subject matter ranges from mobile library services provided by camel and donkey transport to search engines, portals and the World Wide Web. The new edition retains the successful structure of the first with an alphabetical organization providing the basic framework of a coherent collection of connected entries. Conceptual entries explore and explicate all the major issues, theories and activities in information and library science, such as the economics of information and information management. A wholly new entry on information systems, and enhanced entries on the information professions and the information society, are key features of this new edition. Topical entries deal with more specific subjects, such as collections management and information services for ethnic minorities. New or completely revised entries include a group of entries on information law, and a collection of entries on the Internet and the World Wide Web.

Organising Knowledge in a Global Society

Principles and Practice in Libraries and Information Centres

Elsevier Organising Knowledge in a Global Society updates the successful first edition, which has been widely used as an introduction to the field of information organisation, both in Australia and overseas. The work reflects current practice and trends, paying particular attention to how libraries and other information services provide intellectual access to digital information resources through metadata. In this revision, the various information organisation components of the Web 2.0 phenomenon are discussed, including social tagging and folksonomies. The new edition also covers the latest developments in metadata standards, such as Resource Description and Access, and information retrieval systems such as the increasing support for faceted navigation. Examples and case studies have been updated throughout.

Finding What Works in Health Care

Standards for Systematic Reviews

National Academies Press Healthcare decision makers in search of reliable information that compares health interventions increasingly turn to systematic reviews for the best summary of the evidence. Systematic reviews identify, select, assess, and synthesize the findings of similar but separate studies, and can help clarify what is known and not known about the potential benefits and harms of drugs, devices, and other healthcare services. Systematic reviews can be helpful for clinicians who want to integrate research findings

into their daily practices, for patients to make well-informed choices about their own care, for professional medical societies and other organizations that develop clinical practice guidelines. Too often systematic reviews are of uncertain or poor quality. There are no universally accepted standards for developing systematic reviews leading to variability in how conflicts of interest and biases are handled, how evidence is appraised, and the overall scientific rigor of the process. In Finding What Works in Health Care the Institute of Medicine (IOM) recommends 21 standards for developing high-quality systematic reviews of comparative effectiveness research. The standards address the entire systematic review process from the initial steps of formulating the topic and building the review team to producing a detailed final report that synthesizes what the evidence shows and where knowledge gaps remain. Finding What Works in Health Care also proposes a framework for improving the quality of the science underpinning systematic reviews. This book will serve as a vital resource for both sponsors and producers of systematic reviews of comparative effectiveness research.

An Annotated Guide to Current National Bibliographies

K G Saur Verlag Gmbh & Company A response to dramatic changes in the geopolitical map, this new guide offers a frame of reference to negotiate the broad, complex, and ever-changing terrain of national bibliographies.Since the prior edition, at least 28 new countries have been created, with nations such as the former Yugoslavia reconstructing their bibliographies to more clearly reflect the ethnicity of their citizens. Technological advances have also had an impact: six countries now offer their bibliographies exclusively in electronic format.The guide covers 181 countries offering 133 individual national bibliographies and 12 regional bibliographies. Even countries without a current program are represented by their most recent issue.Arranged by country, entries include title and key details, such as the compiler, contents, and format, as well as relevant information specific to the bibliography in question.
