ORTON GILLINGHAM PHONICS. 100 ACTIVITIES TO HELP KIDS WITH DYSLEXIA AND STRUGGLE READERS TO IMPROVE THEIR WRITING AND READING SKILLS. VOLUME 1

Orton Gillingham Phonics. 100 activities to help kids with dyslexia and struggle readers to improve their writing and reading skills. Volume 1. Orton-Gillingham Approach uses systematic phonics to teach language and promote mastery in students with dyslexia. This approach encourages students to grasp the sound-symbol relationship that is necessary to understand alphabetic systems of writing. In this book you will find a multitude of activities that will help your students improve their writing, reading and sound recognition. Specifically in this book you have exercises to: - Help the child guess a word from a drawing and write it - Find and mark open syllables - Differentiate between short and long vowels - Differentiate between open and closed syllables - Blank lines for the instructor to dictate And many other exercises more prepared for the child to practice with different phonics The Orton Gillingham methodology is not a new methodology. It has been used around the world and validated in classrooms since the 1980s. The Orton Gillingham methodology provides the teacher or instructor with a way to develop a structured, individualized and multisensory reading and language skills plan. Orton Gillingham Methodology instructors encourage students to master their reading and language skills on an individual basis. The Orton Gillingham methodology places special emphasis on multisensory education. Since students with dyslexia lack a level of phonemic awareness, learning to read through phonics incorporating all the senses is highly effective.

HANDBOOK OF INTELLIGENCE

EVOLUTIONARY THEORY, HISTORICAL PERSPECTIVE, AND CURRENT CONCEPTS

Springer Numerous functions, cognitive skills, and behaviors are associated with intelligence, yet decades of research has yielded little consensus on its definition. Emerging from often conflicting studies is the provocative idea that intelligence evolved as an adaptation humans needed to keep up with – and survive in – challenging new environments. The Handbook of Intelligence addresses a broad range of issues relating to our cognitive and linguistic past. It is the first full-length volume to place intelligence in an evolutionary/cultural framework, tracing the development of the human mind, exploring differences between humans and other primates, and addressing human thinking and reasoning about its own intelligence and its uses. The works of pioneering thinkers – from Plato to Darwin, Binet to Piaget, Luria to Wechsler – are referenced to illustrate major events in the evolution of theories of intelligence, leading to the current era of multiple intelligences and special education programs. In addition, it examines evolutionary concepts in areas as diverse as creativity, culture, neurocognition, emotional intelligence, and assessment. Featured topics include: The evolution of the human brain from matter to mind Social competition and the evolution of fluid intelligence Multiple intelligences in the new age of thinking Intelligence as a malleable construct From traditional IQ to second-generation intelligence tests The evolution of intelligence, including implications for educational programming and policy. The Handbook of Intelligence is an essential resource for researchers, graduate students, clinicians, and professionals in developmental psychology; assessment, testing and evaluation; language philosophy; personality and social psychology; sociology; and developmental biology.

JUST THE FACTS! WORKBOOK

LESSONS IN MATHEMATICS FOR THE DYSLEXIC STUDENT & VISUAL LEARNER (3RD GRADE)

Unknown at This Time Educators have long known that many students rely on their sense of sight to take in information. When these children see information, rather than just hearing it, they are more likely to understand and remember what is being taught. These students are called visual learners. Many children fall into this category, especially those that are dyslexic or those that have an auditory processing disorder (APD). Visual learners often have a difficult time memorizing the multiplication facts. They understand the concept of multiplication, but are unable to easily remember the times tables. This book offers a different approach. Just the Facts teaches the multiplication facts in a visual manner in order to provide a framework for the child to remember the math fact. Division is also addressed along with many memory cues.

TIMES TABLES TRICKS

FOR VISUAL AND HANDS-ON LEARNERS

For sample pages PREVIEW, visit www.lidiastanton.com. This step-by-step guide is for learners of all ages who: have tried (without success) rote learning methods based on repetition of whole multiplication facts enjoy active learning through discovery and experience have gaps in their times tables knowledge need fast and foolproof strategies to recall times tables in formal assessments, particularly timed ones may have a specific learning difficulty (SpLD), such as dyslexia, dyscalculia and ADD/ADHD The book works by: helping over-learn secure reference points in the times tables, from which more tricky facts can be worked out. validating alternative methods for learning times tables. Rote learning does not work for everyone. Using fingers is not a sign of cheating. For those who are self-conscious, the book's preferred (but not exclusive) way of using fingers is gentle tapping on the table (instead of raising hands) to avoid attracting attention to oneself. offering multisensory instruction methods that help counteract the effects of weak sequential working memory and poor long-term memory for number facts. How to use this book Only practise one 'trick' at a time (until its recall becomes fully automatic) before moving on to the next one. This is to avoid becoming confused or overwhelmed. Once you've learned a trick, practise it as often as you can: later the same day and in the following days and weeks. Share it with other people; use it as a family, class, or party trick. Test yourself during quiet times at home. The book doesn't need to be read from cover to cover. You can dip in and out, starting with the trick that looks most appealing or makes the most sense to you. Different brains respond differently to maths methods. Don't worry if some tricks don't make sense straight away. Leave them for now, enjoy another trick, then come back to it later. It's fine to learn only some tricks in this book.

REPORT OF THE NATIONAL READING PANEL : TEACHING CHILDREN TO READ : AN EVIDENCE-BASED ASSESSMENT OF THE SCIENTIFIC RESEARCH LITERATURE ON READING AND ITS IMPLICATIONS FOR READING INSTRUCTION : REPORTS OF THE SUBGROUPS

"In 1997, Congress asked the Director of the National Institute of Child Health and Human Development (NICHD), in consultation with the Secretary of Education, to convene a national panel to assess the status of research-based knowledge, including the effectiveness of various approaches to teaching children to read. The panel was charged with providing a report that should present the panel's conclusions, an indication of the readiness for application in the classroom of the results of this research, and, if appropriate, a strategy for rapidly disseminating this information to facilitate effective reading instruction in the schools" -- p. 1-1.
