Handbook to Practical Disaster Preparedness for the Family [Arthur Bradley](#) **Ninety-nine percent of the time the world spins like a top, the skies are clear, and your refrigerator is full of milk and cheese. But know with certainty that the world is a dangerous place. Storms rage, fires burn, and diseases spread. No one is ever completely safe. Not you. Not your children. We all live as part of a very complex ecosystem that is unpredictable and willing to kill us without remorse or pause. This book will help you to establish a practical disaster preparedness plan for your entire family, covering all 14 basic human needs. Additional information is also presented for those with special needs, including the elderly, children, people with disabilities, pregnant women, and pets. Every topic is well researched, with over 240 references cited, and is presented in a clear, easy to read format.** **Carbon Monoxide Poisoning** [CRC Press](#) **While an ever-present and familiar toxin, carbon monoxide (CO) remains the number one poison in our environment. This silent killer is responsible for over 2,000 deaths a year in the United States alone. The public and healthcare communities need quality information about the many risks presented by carbon monoxide exposure. Edited by a leading expert in the field, Carbon Monoxide Poisoning delineates the successful means to prevent, identify, and manage the effects of CO poisoning. This volume explores new information on CO toxicity, including rehabilitation, the dissemination of information to the public, litigation involving CO poisoning, economic loss assessment, and firefighting. A series of chapters detail the risk of CO poisoning from kitchen ranges, recreational vehicles, and power boats. Expert contributors survey diagnostic procedures and devices, incorporating advances in brain SPECT imaging and non-invasive pulse-oximetry. The book includes chapters that specifically address the pros and cons of hyperbaric oxygen therapy and thoroughly review the physiological effects of acute and long term exposure to CO, as well as the neurocognitive and neurobehavioral sequelae. Whether you are a healthcare professional who treats CO poisoning, a lawyer involved in litigation for loss of life or property due to CO poisoning, or an engineer developing a well-insulated structure with sufficient ventilation; you will face the challenges raised by CO toxicology. Offering the only comprehensive reference on the subject, this multi-faceted guide takes an innovative look at how we can identify, treat, and prevent harmful exposure to carbon monoxide.** **Product Liability Desk Reference: A Fifty-State Compendium, 2020 Edition (IL)** [Wolters Kluwer](#) **On the front lines of product liability disputes, successful litigation planning begins with immediate access to the product liability laws of various jurisdictions--plus an understanding of the countless differences among them. Auto Safety Oversight Hearing--Corvair Heater, Hearing Before..., 92-2, February 16, 1972** **Products Liability Law** [Aspen Publishing](#) **Products Liability Law, Second Edition, by prolific tort scholar Mark Geistfeld, represents the "next generation" of casebooks on products liability. Earlier texts focused on the relative merits of strict liability and negligence, embodied in the apparently competing liability frameworks of the consumer expectations test in the Restatement (Second) of Torts and the risk-utility test in the Restatement (Third) of Torts. The majority of courts, however, have incorporated the risk-utility test into the framework of consumer expectations. By providing balanced coverage of both consumer expectations and the risk-utility test, the casebook keeps pace with ongoing developments in the case law and moves beyond the battles that largely defined products liability in the twentieth century. In addition to teaching students how liability rules protect consumer expectations via comprehensive application of the risk-utility test, this innovative casebook underscores the importance of doctrinal history, the psychology of evaluating product risks, and the role of products liability in the modern regulatory state. Students will learn how courts have applied established doctrines to novel**

problems ranging from the relevance of scientific evidence in toxic-tort cases to the distribution of defective products on the Amazon online marketplace. To further illustrate this dynamic, the casebook has twenty-nine problems with associated analysis involving the liability issues likely to be raised by the emerging technology of autonomous vehicles. Finally, the casebook reinforces students' knowledge of fundamental tort principles while developing specialized expertise and a deeper understanding of the torts process. New to the Second Edition: A dozen new main cases updating older case law, providing coverage of new issues not addressed in the First Edition, and/or improving upon the analysis provided by the associated case in the First Edition Retention of the majority of main cases from the first edition, with revisions to the ensuing notes incorporating relevant case law developments A reorganized and updated chapter covering the controversy over the relative merits of the consumer expectations and risk-utility tests Comprehensive discussion of the tort version of the implied warranty—the genesis of the consumer expectations test—and its relation to product malfunctions and the risk-utility test A new chapter addressing the existence of the tort duty and identifying the difference between patent dangers and patent defects Reorganization of the chapter on factual causation, emphasizing the continuity of evidentiary problems running across different types of cases, ranging from the heeding presumption in warning cases, to market-share liability, to proof of both general and specific causation in toxic-tort cases Professors and students will benefit from: Classroom-tested materials taught for over 20 years by an award-winning professor Interesting cases that illustrate both the traditional and contemporary character of products liability litigation; cases are followed by extensive notes Each chapter addressing doctrinal issues concludes with problems on autonomous vehicles. The full set of 29 problems provides students with the necessary background for understanding liability issues posed by this emerging technology. Each problem is followed by the author's analysis of the associated issues, cross-referenced to the relevant casebook material. **Masonry Heaters Designing, Building, and Living with a Piece of the Sun** [Chelsea Green Publishing](#) A complete guide to designing and living with one of the oldest, and yet one of the newest, heating devices.
