## The Therapeutic Potential of Marihuana

**Springer Science & Business Media** Scientific information about cannabis and its components has grown exponentially during the past decade. Certain of the findings have led to exploratory studies into the therapeutic utility of the drug. At the present time, a number of areas of usefulness have been investigated, with some showing greater promise than others. At what point should these data be collected and presented? Should it be early, after some initial impressions have been obtained? Or should it come later, following confirmatory studies by others? Both stages of development are represented in this volume. In a number of instances, the papers consist of hitherto unpublished material. It seemed worthwhile to bring together the investigators working in a wide variety of disciplines who had in common their research activities in the therapeutic aspects of the cannabinoids and related synthetic compounds. This was done at the Asilomar Conference Center in Pacific Grove, California during November, 1975. The papers presented and the ensuing discussion constitute the contents of this volume. It is the Editors' hope that the book will stimulate further involvement in the therapeutic studies. It should not be expected, nor is it anticipated that some cannabinoid will be available commercially in the near future. The nature of the approval process is such that years elapse between initial testing, however promising, and final approval for marketing. This is particularly true for a completely new chemical entity, and even more so for one with a checkered reputation.

## Yvain

### The Knight of the Lion

[Yale University Press](#) The twelfth-century French poet Chrétien de Troyes is a major figure in European literature. His courtly romances fathered the Arthurian tradition and influenced countless other poets in England as well as on the continent. Yet because of the difficulty of capturing his swift-moving style in translation, English-speaking audiences are largely unfamiliar with the pleasures of reading his poems. Now, for the first time, an experienced translator of medieval verse who is himself a poet provides a translation of Chrétien's major poem, Yvain, in verse that fully and satisfyingly captures the movement, the sense, and the spirit of the Old French original. Yvain is a courtly romance with a moral tenor; it is ironic and sometimes bawdy; the poetry is crisp and vivid. In addition, the psychological and the socio-historical perceptions of the poem are of profound literary and historical importance, for it evokes the emotions and the values of a flourishing, vibrant medieval past.

## Earthquake Prediction Techniques

One of the keystones of science is the ability to precisely and consistently forecast natural phenomena. Unfortunately, earthquake prediction research has been plagued by controversy, and it remains an outstanding problem; for a review of some of the historical challenges. Today's scientists understand earthquakes a lot better than we did even 50 years ago, but they still can't match the quake-predicting expertise of the common toad, which can detect seismic activity days in advance of a quake. As a result, most earthquake predictions are vague at best. Scientists have had more success predicting aftershocks, additional quakes following an early earthquake. These predictions are based on extensive research of aftershock patterns. Earthquake forecasting and prediction is an active topic of geological research. Geoscientists are able to identify particular areas of risk and, if there is sufficient information, to make probabilistic forecasts about the likelihood of earthquakes happening in a specified area over a specified period. This volume is packed with state-of-art information covering various methods and techniques for evaluating earthquake predictions and earthquake forecasts. This book brings a combination of basic earthquake science techniques that will make the book understandable to the non-specialist, a good assortment of data and research conclusions, and a bare-knuckles appraisal of current philosophy and strategy for prediction of earthquakes. The book includes field, laboratory, and theoretical investigations of earthquake mechanisms and fault zones. Progress in long- and intermediate-term earthquake prediction is reviewed emphasizing results from various sites.

Snake got the tattoo before he even got the uniform. Hodges was haunted by the spirits of family heroes. Three young men, from vastly different worlds, were plunged into a white-hot, murderous melting pot of jungle warfare in the An Hoa Basin, Vietnam, 1969. They had no way of knowing what awaited them. For nothing could have prepared them for the madness of what they found. And in the heat and horror of battle they took on new identities, took on each other, and were reborn in fields of fire... ## P.P. Ewald and His Dynamical Theory of X-ray Diffraction

## A Memorial Volume for Paul P. Ewald, 23 January 1888-22 August 1985

[Oxford University Press on Demand](#) Paul Ewald's 1916-1917 masterpiece *On the Foundations of Crystal Optics* described the self-consistent interaction of electromagnetic waves with crystals on a molecular level. While astonishing in its detailed predictions for X-ray diffraction, full appreciation of the theory and its utility had to await much later advances in measurement techniques and crystal growth. Today, concepts introduced in the theory--now known as the Ewald sphere, Ewald summation, and Ewald-Oseen extinction--have become mainstays in diverse areas of modern physics. This memorial volume, with contributions by leading figures in the field, is an affectionate survey of Ewald's life, scientific work, and leading role in the international crystallographic community. Historians of science, and particularly of solid state physics and crystallography, will find this volume a compelling and fascinating tribute to this important scientist.

## Public & Private Science

### The King George III Collection

[Oxford University Press, USA](#) In October this year, The King George III Collection, a unique and extraordinarily well preserved assembly of scientific instruments, goes on display in a specially commissioned gallery at the Science Museum in London. This lavishly illustrated book explores the development of scientific exploration during the period and also comprises the catalogue of this collection. The result is a fascinating perspective on scientific life in London during the mid-eighteenth century. Public lectures on 'natural' or 'experimental philosophy' had become well established and very popular by this time, and craftsmen made apparatus to be used in these demonstrations. George Adams was one of the most well-known of these craftsmen, and he was commissioned by George III to make various pieces of equipment which were to be used for entertaining or instructing members of the royal family and household. This apparatus is both ornate and of a very high quality and has remained remarkably well preserved. The rest of the collection comprises the equipment that was housed at the Royal Observatory and that apparatus is much simpler and utilitarian in design because it was made to be used in public lectures. The collection illustrates the private and public aspects of the spread of scientific knowledge in the eighteenth century and the book explores the link between this spread of knowledge and the broader cultural developments of the period.

### The Forgotten Rohingya: Their Struggle for Human Rights in Burma

Imagine that you are living in a country that does not recognize you as a citizen in spite of the fact that your people have maintained a continuous existence there for several centuries. If that was not enough of a traumatic experience, consider that because of your racial, ethnic and religious identity other ethnic groups that are fighting the brutal military regime in your country for their self-determination and human rights consider you as "settlers" from a neighboring country. It must be your worst nightmare when you realize that half of your people (almost 2 million) have been forced to take asylum or refuge outside, and you may be the next in line to seek a way out of this living hell of xenophobia, discrimination, intolerance, racism and bigotry. The victims are the Rohingya people of Burma (Myanmar). Because of their religion, race, ethnicity, color and language they are the most discriminated and persecuted people in our planet. Some argue that they are also one of the most forgotten. The Myanmar military regime has denied their citizenship rights, claiming that they are illegal settlers from nearby Bangladesh who have moved into Arakan during the British occupation of Burma in the 19th century. Is there any truth to such allegations? Does the military junta apply the same litmus test against all ethnic and religious groups in matters of citizenship? What is the basis for a nation's claim to self-determination? Must a people wander in the wilderness for two millennia and suffer repeated persecution, humiliation and genocide to qualify? How about the rights of a minority community to survive with their culture and traditions intact? Do they need to be 'children' of a 'higher' God to qualify? What makes the children of a 'lesser' God to be forgotten and denied the same treatment and privilege that was granted hitherto to other nations? For much of its history, Burma has been ruled by military. As has once again been demonstrated recently they are brutal, savage and tyrannical. They have ignored people's verdict in the election and imprisoned leaders and workers of the democracy movement. They cannot be guarantors or protectors of human rights of anyone, let alone religious and ethnic minorities. Do you know that the Rohingyas - face cruel restriction on marriage and those married without government authorization are paraded naked on the streets? - Are restricted from traveling outside their villages? - Have no legal right to own land or property? - Are restricted from getting education, finding work, getting medical and health care? - Are subjected to land confiscation, forced eviction and destruction of homes, offices, schools, mosques, shops, etc., and face religious persecution on a daily basis? - Are victims of staged riots, forced starvation, arbitrary taxation, extortion, arrest, torture and extra-judicial killings? - Are forced to do slave labor for establishment of government infrastructure, new Buddhist settlements, pagodas and monasteries on evicted lands with the government intent of changing the landscape and demography of Arakan? - Are forced to convert to Buddhism &/or worship Buddha? Do you know that when it comes to the Rohingya people, the Burmese government doesn't uphold any of the Articles of the Universal Declaration of Human Rights? Nothing can excuse us from the criminal silence that we practice in not voicing our concern about the plight of the Rohingya people. "The Forgotten Rohingya" makes a strong case for mobilizing concerned citizens of our globe to ease their sufferings. The author analyzes origin of the Rohingya people and offers ideas to solve their problem. The author also discusses problems of xenophobia and racism, which are so rampant in this country of many races, ethnicities and religions. He also analyzes the role of Daw Suu Kyi and failure of Burma's orange revolution.
