The Animal Manifesto

Six Reasons for Expanding Our Compassion Footprint

New World Library In this inspirational call to action, Marc Bekoff, the world’s leading expert on animal emotions, gently shows that improving our treatment of animals is a matter of rethinking our many daily decisions and “expanding our compassion footprint.” He demonstrates that animals experience a rich range of emotions, including empathy and compassion, and that they clearly know right from wrong. Driven by moral imperatives and pressing environmental realities, Bekoff offers six compelling reasons for changing the way we treat animals — whether they’re in factory farms, labs, circuses, or our vanishing wilderness. The result is a well-researched, informative guide that will change animal and human lives for the better.

Temperature Calculation in Fire Safety Engineering

Springer This book provides a consistent scientific background to engineering calculation methods applicable to analyses of materials reaction-to-fire, as well as fire resistance of structures. Several new and unique formulas and diagrams which facilitate calculations are presented. It focuses on problems involving high temperature conditions and, in particular, defines boundary conditions in a suitable way for calculations. A large portion of the book is devoted to boundary conditions and measurements of thermal exposure by radiation and convection. The concepts and theories of adiabatic surface temperature and measurements of temperature with plate thermometers are thoroughly explained.Also presented is a renewed method for modeling compartment fires, with the resulting simple and accurate prediction tools for both pre- and post-flashover fires. The final chapters deal with temperature calculations in steel, concrete and timber structures exposed to standard time-temperature fire curves. Useful temperature calculation tools are included, and several examples demonstrate how the finite element code TASEF can be used to calculate temperature in various configurations. Temperature Calculation in Fire Safety Engineering is intended for researchers, students, teachers, and consultants in fire safety engineering. It is also suitable for others interested in analyzing and understanding fire, fire dynamics, and temperature development. Review questions and exercises are provided for instructor use.
